

Bolt Cleaning Slot

On rifles I build there is a cleaning slot in the bolt and an air passage in the extractor. This may help in removing debris from under the extractor. Put a cleaner in the bolt holes alongside of the extractor and let soak.

Using safety glasses blow out using compressed air in back of the extractor.

Small Hole for Compressed Air

This will have to be done on a regular basis in order to work otherwise a removal of the extractor and cleaning will be necessary.
